

SHORE GRIP

Pull off desired amount of Shore Grip, roll into a ball and knead until soft and warm. Roll on a flat surface to stretch out as one would when making a pretzel.

Place small amount around edges, corners, center or all as mentioned depending on the size and weight of the object to be held or mounted.

Press object down and into place firmly giving a slight twist clockwise and then back counter clockwise. Press down once more and let cure for 1 hour.

After 1 hour, test to make sure object is secure by gently nudging the object. If object appears to be firmly secure, you're ready to go off shore. Shore Grip will protect your valuables in any sea condition.

REMOVAL: Gently twist and pull away the object from the surface it was adhered to. Roll excess Shore Grip off of the surface(s) with your fingers or by dabbing with a larger piece of Shore Grip. Removed Shore Grip can be stored in its original package for reuse at a later time on the same or new object.

NOTE: Surfaces must be clean and dry prior to use. Do not use Shore Grip on silk-screen printed, hand printed or absorbent wall paper, recently decorated or delicate surfaces. Always test in an inconspicuous area before use. Triton Marine Products maximum liability is the retail price of this product.!
